

Agroecology in Lebanon: A Field Perspective

Exploring Sustainable Practices in Lebanese Agriculture

Dr Salem Darwich

Dec 2024

Introduction to Agroecology in Lebanon

 Agroecology integrates ecological principles into agricultural practices.

 Focuses on sustainable farming to address food security and environmental challenges.

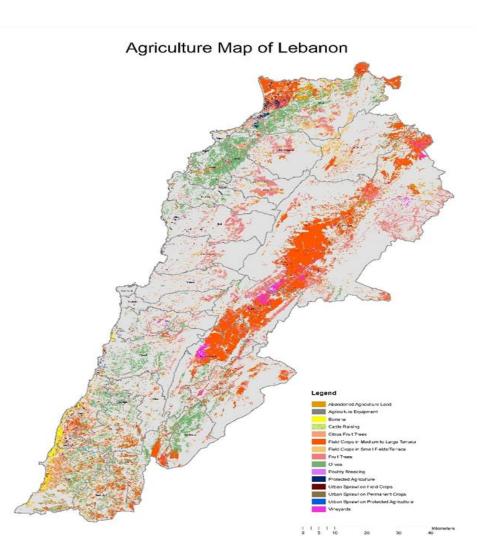

Lebanon's Agricultural Landscape

- Lebanon has diverse agricultural zones, from coastal plains to mountain terraces.
- Key crops include olives, citrus, grapes, and cereals.

Source: NCSR-CAPWATER, 2015

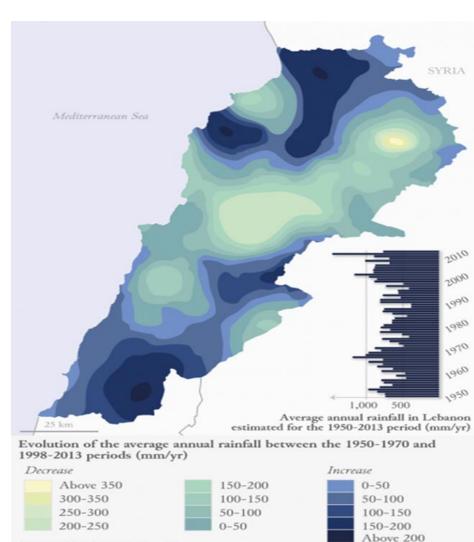

Challenges in Lebanese Agriculture

- 1. Water scarcity due to climate change and mismanagement.
- 2. Soil degradation and loss of fertility.
- 3. Economic instability affecting farmers' livelihoods.

The SupMed Project in Lebanon

- SupMed focuses on improving water and land management practices.
- Targets the Bekaa Valley with innovative agroecological methods.

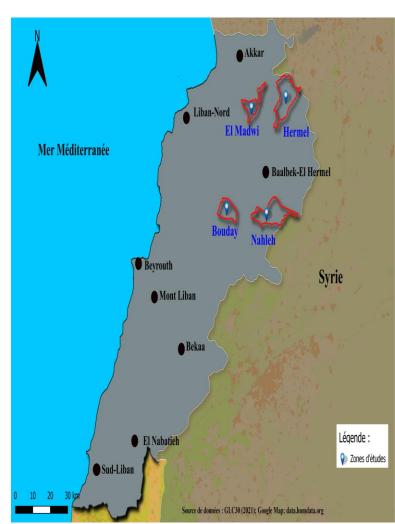

Agroecological Practices by SupMed

- 1. Water-efficient irrigation techniques (e.g., drip irrigation).
- 2. Crop diversification to enhance soil health.
- 3. Organic pest control methods.

Field Observations in Lebanon

 Farmers adopting agroecological practices report improved yields.

 Challenges include access to resources and knowledge gaps.

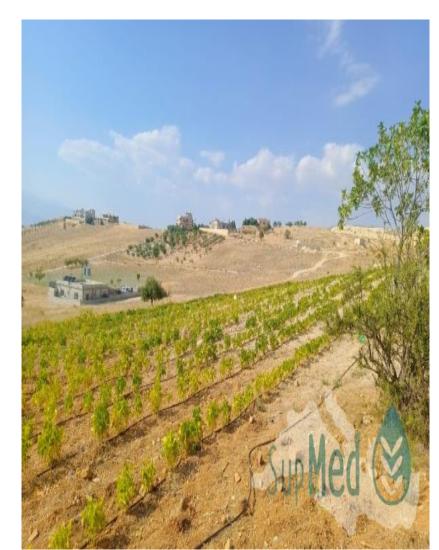

Socio-Economic Impact

Agroecology has the potential to:

1. Enhance food security in rural communities.

2. Create sustainable income opportunities for farmers.

Recommendations for Scaling Agroecology

1. Provide training programs for farmers.

2. Strengthen policy support for agroecological initiatives.

3. Promote research and development in sustainable agriculture.

Conclusion

☐ Agroecology offers a pathway to sustainable agriculture in Lebanon.

□ Collaboration between farmers, policymakers, and researchers is key.
